UNIQUE ADVANTAGES

- ▶ One size fits all
- ▶ Extremely impact resistant
- ▶ Safety yellow or transparant
- ▶ Retains its shape, easy to maintain
- ▶ Easy installation

RackBull®

UNIVERSAL RACK PROTECTOR

UNIQUE FUNCTIONING AND SYSTEM

The RackBull is a spectacular innovation of Boplan, leading manufacturer of efficient safety barriers in synthetic material. RackBull gives short shrift to a well-known problem: the lack of one single international standard for the dimensional characteristics of racks. At the moment there are three different diameters for the support rails alone for example. Fortunately as from now on you do not need to worry about the exact size anymore, as the RackBull adjusts itself to the dimensions of each individual rack support rail.

Most other rack protectors dispose of a fixed, immovable core. The core of the RackBull however is highly flexible and extra compressible. This means that it automatically bends around each rack support rail and adjusts itself to the different diameters. Furthermore, the unique construction of the core guarantees an ever bigger energy-absorbing capacity in case it is impacted. The RackBull is without doubt the most usable and best protection against collisions currently available for racks.

ONE SIZE, TWO COLOURS*

RackBull not only distinguishes itself thanks to its 'one size fits all' principle, but also because of its intelligent and well thought-out choice of colours. Next to the standard 'safety yellow' the RackBull is also available in a transparent version. In this way you can put cardboard or plastic strips and charts in the protector containing information that needs to be permanently visible: bar codes, rack numbers, product information etc.

In the future the transparent version will become increasingly important, as more and more countries are implementing a yearly safety inspection of the racks. Thanks to the transparent colour this inspection can be done without having to remove the rack protectors first. That's quite some time that can be gained!

Transparent + inlay

(*) Other colours are available on request.

INSTALLATION BY MEANS OF ONE SINGLE CLICK

As from now on worrying about the right size and complex installation procedures are ancient history. Just push the RackBull against the rack support rails and you will automatically hear a click. The RackBull is now connected. Quick, efficient and extremely simple!

Step 1: **Click**, Step 2: **Done!**

Clip-on tool

DISCOVER ALL THE ADVANTAGES

- For racks of 75 up to 120 mm
- Extremely impact resistant
- In colour or transparent
- Transparent = time-saving (racks can be inspected without having to remove the protectors first)
- All the advantages of synthetic material (retains its shape, durable and sustainable, easy to maintain)
- Easy installation
- Extra injection with polyethylene foam possible in order to increase the impact resistance even more
- Broader foot for the protection of the wedge anchor bolts
- Offers protection at a height of up to 600 mm
- Stackable for protection at bigger heights
- Can be combined with other Boplan products such as rack ends, bollards and goal posts
- One size, one standardised production process, so extra cost-efficient
